Election/Restrictions

1. Applicant's election with traverse of Group I in Paper No. 12 is acknowledged. The traversal is on the ground(s) that the examiner has not explained why each group lacks unity with each other group and has not specifically identified the unique special technical feature in each group. This is not found persuasive because under PCT Rules also require that the special technical feature provide a contribution over the prior art. Where it can be seen that the special technical feature does not provide a contribution over the prior art, as in the present case, lack of unity is proper.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 75-89, 99, and 105-110 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Patent partial translation No. 62-2226848.

4. The Japanese patent teaches in the partial translation a fiber compounded hydraulic reinforcing material comprising reinforcing fibers, organic binder and unhardened inorganic powder. Though the Japanese patent teaches a slurry, it is the position of the examiner that it would have been an obvious variation to premix the dry ingredients and subsequently add the resin. In addition, the fibers can be short fibers that were cut as contemplated by applicants and can be carbon fiber, also as set forth

Art Unit: 1774

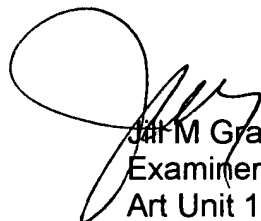

by applicants. Furthermore, the Japanese patent teaches a hardened reinforcing material and method substantially of the type contemplated by applicants. Therefore, it would have been obvious to one of ordinary skill in the art the to form a fiber compounded hydraulic reinforcing material and hardened reinforcing material of the sort set forth by applicants, motivated by the teachings of the Japanese Patent partial translation.

5. No claims are allowed.
